

Ananas comusus MD-2 Fruiting Pineapple

Growing Guide

1. Place potted pineapples in 30% to 40% shade environment, after watering in.
2. Apply irrigation by overhead sprinkler, but using short cycles, allowing foliage to remain moist, but not allowing potting media to get too wet. Be sure to keep leaf axils moist.
3. Primary fertilization should be foliar. This is a bromelicea and as such has excellent foliar absorption capabilities.
4. Add Fulvic Acid (such as K-Tionic) to foliar feed mix.
