## No. 6 Scindapsus 'Neon' *POTHOS*

Soil – Well drained with lots of aeration.

Fertilizer – 20-20-20 or 20-10-20. Keep ppm lower (Constant feed of 100+/- ppm is ok). Not recommended to use slow release fertilizer.

Water – pH 5.8 to 6.5 is good. Do not over water.

Humidity – Normal tropical environment– avoid low humidity.

Temperatures – 85°F is good in the day and 65°F is best at night.

Light – This is a low light production plant– 1000 ft candles and no more.

Higher light will cause leaf scorching. Will tolerate more light in the winter and less in the summer.

Pests – Little to none.

Diseases – Blanching of the leaves if too much light.

Growth Rates – Slow growth. Not an aggressive vining plant. Roots are very strong.
