

Alpinia 'Variegated Ginger' Elle Pot 72

THERE IS A DIFFERENCE.....

Here are just some of the advantages:

- Highly selected clone
- Tissue culture produces high uniformity
- High yellow coloration
- Easily forms shoots
- Disease resistant
- Less off-types
- Well developed root system because the Elle Pot allows an easy extraction when transferring the product from liner to pot. This is a critical situation for Gingers which do not like their roots disturbed.
- Soil mass will not fall apart when transplanting.
- This stable media system allows for less transplant shock and easier transport, which also reduced losses after planting.
