

Aspidistra elatior - Cast Iron plant

THIS ONE'S TOUGH AS NAILS!

- Cast Iron plant is aptly named. It is tolerant of poor soil, low light and little care.
- Great plant for low light interior settings.
- Good for use in the landscape in zones 7-10. Shade or part sun. They will even tolerate heavy shade, as under the canopy of live Oak trees.
- Leaves are excellent in cut flower arrangements, lasting a long time.
- These bare root plants are great for 6", 8" or 10" pots.
