ZAMIOCULCUS ZAMIIFOLIA 'ZZ Plant'

THE ULTIMATE LOW MAINTENANCE PLANT

Save 6-7 months of conventional production time. 4" pre-finished ZZ plants....

- Excellent bump-up for larger size pots (good for 6", 8", 10", and 14" pots).
- 3 plants per 4" pot.
- Single season finishing (6").
- Works really well under low light in xeriscape conditions (more tolerant of low light than even Sanseveria and Aspidistra).
- Has very few, if any, insect problems.
- Is an excellent accent or specimen plant.

This interesting succulent resembles a cycad with its thick glossy leaflets and its semi-erect "fronds." New shoots form from underground bulbettes. ZZ's are an extremely tough plant performing well indoors and handling neglect extremely well. Grows very slowly but appears to be practically picture perfect with very minimal maintenance, making it a favorite for use by interiorscape professionals in commercial settings.
